Note: On Bench Resource, Immediate Availability, LWD: 13/10 **2026/10/05**

To,

The Hiring Manager

I am a Full-Stack Software Engineer with **8+ years of experience** designing and developing scalable web applications, microservices, micro-frontend architectures, and enterprise-grade solutions. I have strong expertise across the **MERN stack** and modern **JavaScript/TypeScript ecosystems**, with hands-on experience in **Nest.js, RabbitMQ, Redis, Elasticsearch, PostgreSQL, MongoDB, MySQL, Docker, Kubernetes, and cloud integrations**.

Throughout my career, I have successfully handled end-to-end software development—from architecture and implementation to deployment and optimization—while also collaborating closely with clients, mentoring engineering teams, and driving technical solutions. My experience spans diverse technology stacks and complex business requirements, enabling me to quickly adapt to new environments and deliver reliable, scalable solutions.

In addition to my software engineering background, I have experience in **Cyber Forensics** and **Cyber Security**, giving me a strong understanding of secure system design, data protection, risk mitigation, and compliance. This combination of engineering expertise and security awareness allows me to build solutions that are not only scalable and maintainable but also secure and resilient.

NOTE:

We have completed Phase 1 of the Logistics project called “EyeonIT”.

Due to Project insufficiency I’m on a Bench resource, having LWD 13th October.

So, I’m looking for immediate availability.

Best regards,

Bhargav Kahar

Sr. Software Engineer
